About us

Implant Dental Center Ružević is the most modern center for dental medicine and Implantology in Dalmatia, with the motto "All in one place". Within our center, we have four modernly equipped dental offices, surgical room, a sterilization room and an X-ray.

At our Dental Center, we do all kinds of dental services, from beginning to the end, which is more suitable for patients because they have everything in one place!

*"I strongly
believe that
everyone is born
with the right of
healthy
smiling!"*

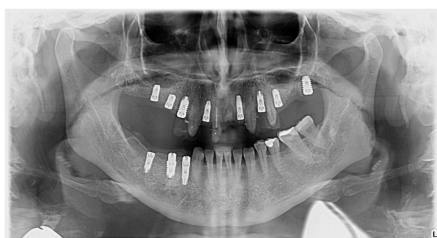

Niki Ružević, M.D.

The head of the clinic is **Niki Ružević, M.D.**, who opened his dental practice in 1987 on the island of Hvar, who has been active in dental and health tourism since the very beginning because of the location of the office on the island of Hvar, and his patients were citizens of various countries who took advantage of their holiday and renewed their oral health. Dr. Ružević's practice cooperates with the best technicians in Split to become one of the most outstanding dental offices in this region. Through continuous education and the acquisition of new knowledge and skills, we assure the best quality of the service. We are largely ahead from similar institutions in the Croatia and we feel that we have gone farthest in the field of RTG diagnostics and analysis, individual approach to every patient, and applying the most sophisticated methods, premium materials and the most modern devices in our day-to-day work to successfully address the challenges of oral health.

IDC Ružević is a multi-domain licensed Certificate Center that guarantees the patient a successful approach and solving their problems as in the world's best centers, with considerably more favorable financial conditions.

Along with the services that are normally performed in every higher-ranking dental clinic, we specialize in the following types of procedures:

RTG 2D & 3D CBCT

Without these shots, there is no good diagnostic, analysis and planning of any therapy, at the beginning or through the control shots after the performed procedure.

LICENSED CENTER!

KAPS - MICROSCOPIC ENDODONTION

This procedure is a novelty in approaching the treatment and rehabilitation, either in fixing one tooth or in surgical disciplines with magnifications up to 40 times.

LICENSED CENTER!

SEDATION

A special type of anesthesia, much more comfortable for the patient than classic local anesthesia, especially in major procedures that last more than 2 hours.

LICENSED CENTER!

CAD / CAM

In addition to classical prosthodontic treatments with a metal or titanium base, we also work with CAD / CAM metal-free crowns and bridges, such as Zirconia or EMPRES crowns or bridges.

LICENSED CENTER!

COMPLICATED ORAL - SURGICAL PROCEDURES

Complicated oral - surgical procedures in Implantology and bone augmentation (jaw bone regeneration).

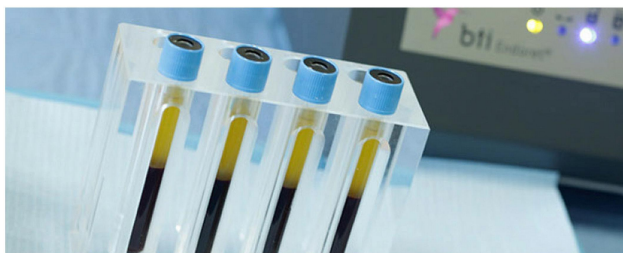

LICENSED CENTER!

ALL TYPES OF IMPLANT-PROSTHETIC PROCEDURES

- All on 2 Implant System
- All on 4 Implant system
- All on 6 Implant system

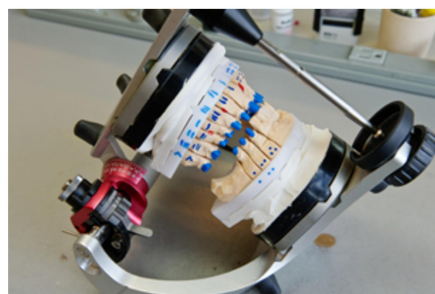

LICENSED CENTER!

AUGMENTATION

Jaw bone regeneration - we use the PRGF Endoret method using patients' blood as autologous from which, by centrifuge, we create blood plasma membranes that are enriched with growth factors.

LICENSED CENTER!

FUNCTIONAL DIAGNOSIS - ARCUS DIGMA 2

An innovative approach to all kinds of prosthetic dental works to avoid bite and temporomandibular joint problems.

LICENSED CENTER!

BICORTICAL IMPLANTOLOGY

A method that is applied when, due to a patient's low bone density, we are not able to perform classical Implantology, even after extensive bone reconstruction. This method allows special types of Implants to set a fixed job, with the entire procedure done in just 3-4 days. We are proud to point out that our center is one of two centers in Croatia that does this procedure.

LICENSED CENTER!

LASER IN DENTISTRY

In our center, we have 3 types of lasers: soft tissue diode laser, helbo laser for removing infectious areas (applicable in surgery, Implantology and Periodontology) and laser for sterilization and disinfection of the root canal before filling the canals. **LICENSED CENTER!**

IDC Ružević has more than 30 years of experience in working with patients, more than 15 years of experience in Implantology, over 60 000 satisfied patients that use our services, over 5 000 successfully placed Implants, a lot of patients from all over the world in dental tourism and a partner dental laboratory that keeps up with our pace.

The Center is constantly educating, acquiring new knowledge and skills and thus upgrading our knowledge. We are constantly following the trends in the world and everything we deem necessary is implemented in our work. Our doctors and nurses have undergone intensive education on all of our services and know how to apply them in the most effective way.
